

Capital Improvement Program

REPLACING OUTDATED INFRASTRUCTURE

Much of the infrastructure that RVSD operates and maintains in your neighborhood to collect, pump and transport approximately four million gallons per day of wastewater is old or outdated.

RVSD is working to rehabilitate underground wastewater pipelines through a construction program that is spread out over roads and easements throughout the Ross Valley communities.

The Capital Improvement Program consists of construction projects needed to protect public health and the environment by reducing the risk of sewer spills.

THIS WORK HELPS ACHIEVE RVSD GOALS

- Protect public health and the environment by reducing the risk of sewer spills.
- Work with the community to repair and replace outdated sewer laterals.

MORE INFORMATION ABOUT CONSTRUCTION PROJECTS

To find out if there will be construction in your neighborhood

Email: info@rvsd.org
For general inquiries or to request project information

Call **RVSD at 415-259-2949**
Our office staff are available Monday - Friday from 7:30 a.m. to 12:00 p.m. and 1:00 p.m. to 4:00 p.m. We can assist you with emergency service 24 hours per day, seven days per week.

Construction projects throughout the RVSD service area replace outdated infrastructure and enhance local wastewater system reliability and efficiency.

If you see a public sewer emergency such as a manhole overflow, leaking pipe, or sewage on the ground, **please call the RVSD Emergency Line 24/7 at 415-259-2949 as soon as possible.**

Thank You!

Thank you for helping us in our mission to provide customers with high quality wastewater collection service through a system that has no avoidable sanitary sewer spills at the lowest sustainable cost.

125 Years of Service

Ross Valley Sanitary District

WHO WE ARE

Ross Valley Sanitary District (RVSD) was established in 1899 and for over a century has been dedicated to protecting public health and the environment.

RVSD's mission is to provide customers with high-quality wastewater collection service through a system that has no avoidable sanitary sewer spills at the lowest sustainable cost.

WHAT WE DO

RVSD operates and maintains 200 miles of collection sewer lines and 19 pumping stations which collect, pump and transport approximately four million gallons of wastewater per day to the Central Marin Sanitation Agency treatment plant.

Our infrastructure construction work to replace or rehabilitate miles of gravity sewer lines helps to reduce the risk of sanitary sewer spills in our communities. We also work to update and rehabilitate existing wastewater pump stations by upgrading the pumps, motors, piping, valves, odor control systems, electrical systems and backup power generators to maintain safety, efficiency and reliability.

HOW WE DO IT

Construction and rehabilitation work is prioritized in our Infrastructure Asset Management Plan which identifies and prioritizes capital projects based on risk of asset failure across the entire system. This approach relies on up-to-date system condition information and offers clear, risk-based asset management prioritization focused on the most urgent repairs and improvements.

RVSD also applies innovative and best practice methods and technologies to deliver services. The agency utilizes smoke testing to help identify sources of inflow and infiltration into the wastewater system. We have installed SmartCover® Systems to digitally monitor and alert an impending rise in sewer water levels during storms and potential floods.

The RVSD service areas include Fairfax, San Anselmo, Ross, Larkspur, Bon Air, Sleepy Hollow, Kentfield, Kent Woodlands, Oak Manor and Greenbrae.
